Safe to Swim as soon as you finish!

You can offer the easiest, safest and most affordable calcium, scale, and contaminant removal solution available today.

ECO-FRIENDLY

We use FDA-approved, water-soluble, non-destructive Sodium Bicarbonate or Magnesium Sulfate to eliminate calcium, scale, and other undesirable contaminants from a variety of surfaces.

Our guarantee:

- On-time
- Within budget
- Experienced
- Certified
- Affordable Rates

MOBILE

Because you are mobile, you can blast a variety of projects at different sites.

RESTORE

You're anxious to save time and money while restoring pools, cautious to give it professional attention, but scared you could be making a bigger mess, or worse...damage the tiles.

Our eco-safe process is extremely effective, quick, and easily cleaned. Remove calcium, scale, finishes, stains, paint, and years of neglect and abuse, without harming vegetation.

You can beautify tile and restore it to its' original glory.

EXPERIENCED

"Sanstorm blasters are the best and simplest blast units. They are easy to fill, and training takes about 10 minutes. You can see how much material is remaining in the blaster, it fills in 1/4 the time of other blasters, and is by far the best unit available today." - Terry Redmond

Fountain and pool tile cleaning with abrasive blasting is a safe and effective technique for removing calcium and scale deposits.

Unlike other pool tile cleaning methods which involve dangerous chemicals, the results are faster and cleanup is much easier.

And, it's **safe to swim as soon as you finish!**
