

WHERE STEAM MEETS  
INNOVATION!

# Peregrine

## 1800 SV

The Falcon ProSolutions Peregrine series steamer is the most technologically advanced steamer available.

The unit is designed from the ground up with your operator and budget in mind. The unit comes with a number of exclusive features that make the Peregrine the most safe and easy to use steamer available today.

Applications include:

- Restroom Sanitation
- Tile and Grout Cleaning
- Contract Cleaners
- Bed Bug Elimination
- HD Restaurant Cleaning and Restoration

### THE HEART OF THE SYSTEM

The Peregrine series features boilers that are state of the art technology that takes steam generators into the main stream of cleaning. The dual coil element maximizes surface area and provides a speedy "heat-up" time. The steam pressure and temperatures remain consistent, even under continuous use. The Peregrine features our patented INTELLIGENT BOILER TECHNOLOGY that tells you when it needs descaling and provides the highest steam temperatures in its class. IBT allows any operator to perform the descaling maintenance to maintain optimum performance without the need for service parts or tools!

The digital control panel of the Peregrine manages everything for you! The LCD interface allows you to monitor all functions and communicates when maintenance must be performed:

- Indicators for on and off of all functions; Steam, Vacuum and Chemical dispensing
- Indicators for which of 3 steam and vacuum levels are being used
- Visible indicator to tell you when maintenance needs to be performed
- Digital readout of both steam temperature and pressure levels
- Visual and audible warning signals alert the operator when the unit is out of water or chemical

The operator controls are designed for ease of use all day long! The one button on and off controls for all functions make use and training simple. The operator handle utilizes an on-demand steam button in the grip that has an auto-return-to-off feature. This makes the Peregrine one of the safest and fatigue free steamers to operate. All adjustments are made from the handle which means you never have to walk back to change a setting!

The patented 2 piece insulated wand is designed to eliminate the "hot wand" problem found on older design steamers. You can use the Peregrine for a full shift without feeling discomfort or heat build-up where the operator must place their hands.
